Course Materials – Read Me First!

Hey, we included a bunch of resources for this course, and they're all contained in the next episode. Once you install Anaconda, you need to use them! Here's what you should do:

1. Follow along how to install Python in the next video, "Setting Up Python". There's even a document included called "How to Set Up Python and Create a Virtual Environment".

2. Once you have downloaded these resources, open Jupyter Notebook, navigate to where you downloaded these resources, and double-click on Chapter 1.ipynb to see the code Dartanion uses for all Chapter 1 episodes, Chapter 2 episodes, and so on.

3. You can use the Glossary at any time to remind yourself what each term means and does, so use it as you desire.

Have fun!
